ETL assessment program – Quick (self-service and free) or comprehensive mode

Automated ETL transformation to AWS Glue

Fast. Simple.

Migrating traditional ETL systems to AWS helps enterprises enhance scalability, reduce costs, and improve business outcomes. But the path to modernization is complex and risky. Impetus' cloud accelerator, LeapLogic assesses your entire ETL inventory and helps you accelerate and de-risk the journey to an AWS-native stack.
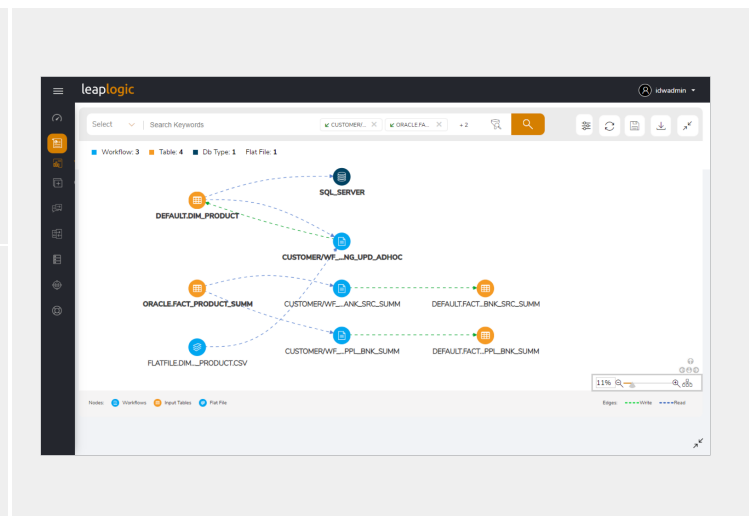

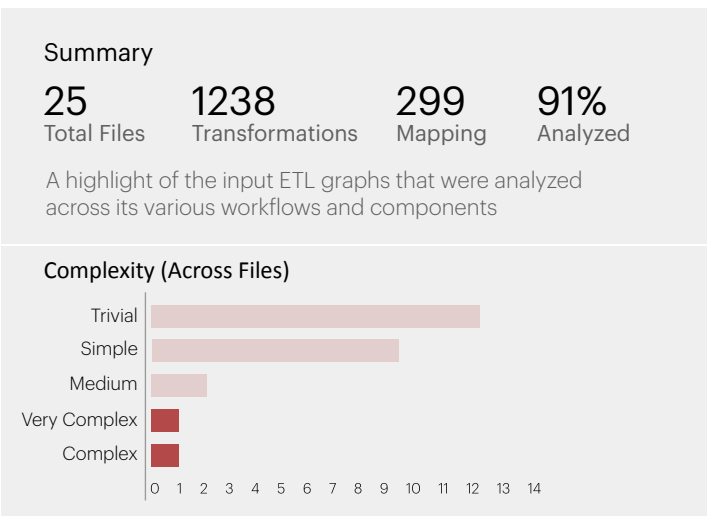

Free quick mode – What you get

- Instant insights on inventory, complexity, and dependencies

- An assessment report with a detailed cost-effort estimate in 2 business days

How it works

The free self-service tool profiles diverse ETL scripts/jobs for complexity, lineage, technical debt and optimization opportunities when planning a migration to AWS Glue. All you have to do is follow these easy steps:

- Request access to our hosted self-service assessment platform (no installation needed)

- Provide basic user information

- Get login credentials over email

- Upload your ETL scripts

- Run your ETL assessment

Sample of a quick mode ETL assessment

Beyond quick mode assessment: What's possible

Comprehensive data warehouse and ETL assessment

- Integrated assessment and insights (jobs, DML, DDL, ETL, procedure, logs, scheduler scripts, etc.)

- Deep dive into lineage, usage patterns, resource utilization metrics, resource-intensive workloads, etc.

- Identification of schema, code, and orchestration optimization opportunities

- Architectural blueprint for AWS-native stack, including components and services for storage, processing, analytics, security, etc.

- Phase-wise migration plan with use case prioritization based on business goals, SLAs, and interdependencies

- Timelines and fixed cost estimate for end-to-end automated modernization

Automated transformation of ETL, data warehouse and analytics workloads

- Transformation of legacy workloads, code, and core business logic to AWS-native equivalents

- Pipeline-based automated validation for data, and query at row and cell-level

- AWS-specific executable packaging and orchestration with optimal price-performance ratio

- Operationalization and post go-live support

- 4x faster than manual migration

- Contact us to discuss pricing for transformation
